Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. **Claims 8, 9 and 11-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Adams et al. (6,099,497) in view of Webster et al. (WO 00/27463).** Adams et al. disclose a method for treating a proximal portion of a main vessel and the opening of a side branch vessel comprising providing a stent (see figure 9) surrounding a pair of balloons, where the balloons can be of a different length (see figure 17), advancing the balloons and stent to the site of the bifurcation, inflating the balloons to deploy the stent, and deflating the balloons to withdraw the catheter. However, Adams et al. fail to disclose no portion of the stent is disposed distal to the opening of the branch vessel. Attention is drawn to Webster et al., who teaches the use of a stent for a bifurcation (see figure 1c) that does not extend distally beyond the opening when deployed (see figure 2d). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have configured the stent of Adams et al. such that it does not extend distal to the opening in the manner taught by Webster et al. Such a modification is merely simple substitution of one known element for another to obtain predictable results. *KSR*, 550 U.S. at ___, 82 USPQ2d at 1396.

Response to Arguments

3. Applicant's arguments filed 4/20/2009 have been fully considered and are persuasive. The rejection has been withdrawn.
